

C6

	A	B
1	Task / Weeks (Beginning)	Week 1 13-10-2
2	1. Literature and Methods Review	
3	Review and summarise doubly robust approaches for survival:	
	- Doubly robust standardisation / IPWRA	
	- AIPW	
4	- TMLE (super learner vs one model)	
5	Assess prior simulation studies comparing doubly robust approaches for binary data X	
6	Discuss and identify an outcome model for consistency across the approaches e.g. a parametric model? X	
7	2. Implementation in R on Illustrative Dataset	
8	Identify a simple dataset to implement methods (for point exposures, time-fixed confounders and conditionally independent censoring) X	
9	Implement and test IPWRA	
10	Implement and test AIPW	
11	Implement and test TMLE	
12	Summarise and validate preliminary results	
13	3. Simulation Study Design	
14	Define simulation scenarios with ADEMP e.g. low/moderate/severe model misspecification	
15	Work on the DGM	
16	Construct the entire simulation pipeline code	
17	4. Perform Simulation Study	
18	Execute code, debug and produce results	
19	5. Summarise Simulation Results	
20	Summarise results and interpret	
21	6. Documentation, Reporting and Communication	
22	Begin draft of paper communicating methods comparison	
23	Submit abstract for 2026/27 conference	
24	Internally present to wider group for feedback
